Earth quakes (1)

1 Search criteria - shows the user which filters have been applied so far (in this example the keyword 'summary' has been used to generate this set of results).

If the user clicks on [remove this filter](#) then the results page will reload without the keyword applied (and so in this example the result set would then contain all site resources).

2 Default view for this page is to present the **first 10 resource items of the result set** (in this case those containing the keyword "Summary").

Each resource is presented by displaying key information that a teacher needs in order to decide whether the resource is likely to meet their needs as follows:

- Icon to show resource type
- Descriptive resource title. The title is linked to corresponding resource page itself, therefore it is essential that it looks like a link (ie blue text, underlined, as per Google).
- Topic
- Type
- Key stage
- Description

3 Shows the user how many results are shown on current page as well as how many results in total match the current query.

4 Search again - allows user to start search again either by selecting new criteria from the 4 form elements or by selecting the 'View all resources' link which will load a results page containing all resources held on the site. Drop down lists are set to 'All' by default.

The "Topic" drop down list is not present on this page as no subject has been selected. This prevents the user from searching for an incompatible topic/subject combination.

5 Browse matching resources - as described on page 2.0. The only difference is the module title which emphasises the fact that items shown within the module relate to the current search results.
